INFLUENZA REPORT
2021-22 Influenza Season Week 45 — Week Ending 11/13/2021

INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County remains at a low level. The school absentee rate for Week 45 (8.94%) is higher than what it has been in the past, which could be in part due to COVID-19 (see Figure 1). For the 2021-22 influenza season five new clinics started reporting ILI rates. This data has been retroactively added to the aggregate ILI rates in Figure 2. There were zero hospitalized influenza cases and ILI rates were low during week 45.

Figure 1. Elementary School Absence Rate, Davis County, 2021-22, 2019-20, 5-Year Average

Figure 2. Influenza-like-Illness rate and Hospitalized Influenza Cases, by subtype and admission date, Davis County, 2021-22

Influenza-like Illness (ILI) is defined as fever (temperature of ≥ 100°F [37.8°C]), cough, and/or a sore throat without a known cause other than influenza.

*Some reporting sites’ data was unavailable. Please consider this week’s data as provisional.
INFLUENZA ACTIVITY IN UTAH*

Utah’s influenza severity estimate is currently at a low level during Week 45. There were no hospitalized influenza cases reported during Week 45 in the state of Utah, with a total of six hospitalizations so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 15 specimens were positive for influenza during Week 45. Influenza A and influenza B are both commonly circulating in the community.

INFLUENZA ACTIVITY IN THE UNITED STATES**

During Week 44, influenza activity was low overall in the United States, however, zero states reported no activity. Thirty-seven states reported minimal activity, ten states reported low (including Utah) activity, one state reported moderate activity, one state reported high activity, and one state had insufficient data (see Figure 3).

Collaborating clinical laboratories across the United States reported that 0.3% of respiratory specimens tested were positive for influenza in Week 44. Of those, 77.2% were typed as influenza A and 22.8% as influenza B.

CDC performs genetic and antigenic characterization of U.S. viruses submitted from state and local laboratories. The specimens are also tested for susceptibility of influenza virus to antiviral medications. Virus characterization data will be updated later this season when a sufficient number of specimens have been tested.

VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those with contracted health insurance.

For those without insurance:
- Adults (19—49) can receive the flu shot for $35.
- Adults and Seniors (50+ years) can receive the flu shot for $70.
- Children and adolescents (<19 years) may receive the vaccine for an $8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
