INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County remains at a high level. The school absentee rate (6.91%) continues to climb (see Figure 1). There were seven hospitalized influenza cases reported in Davis County during Week 5, bringing the season total to 64 cases. The number of hospitalized cases decreased during Week 5. The influenza-like illness (ILI) rate for week 5 could not be accurately determined due to a data reporting error (see Figure 2).

Figure 1. Elementary School Absence Rate, Davis County, 2019-20, 2018-19, 5-Year Average

Figure 2. Influenza-like-Illness rate and Hospitalized Influenza Cases, by subtype and admission date, Davis County, 2019-20

Influenza-like Illness (ILI) is defined as fever (temperature of ≥ 100°F [37.8°C]), cough, and/or a sore throat without a known cause other than influenza.
INFLUENZA ACTIVITY IN UTAH*

Utah’s influenza severity estimate remained at a high level during Week 4. There were 78 hospitalized influenza cases reported during Week 5 in the state of Utah, with a total of 640 cases so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 1,433 specimens were positive for influenza during Week 5. The predominant circulating virus this week remains influenza B, however influenza A has been increasing in recent weeks.

INFLUENZA ACTIVITY IN THE UNITED STATES**

Influenza activity in the United States remains high, however the number of hospitalizations are similar to what has been seen in past seasons. During Week 4, one state reported regional activity, and 49 states (including Utah) reported widespread activity (see Figure 3).

Collaborating clinical laboratories across the United States reported that 27.7% of respiratory specimens tested were positive for influenza in Week 4. Of those, 49.8% were typed as influenza A and 50.2% as influenza B.

CDC antigenically characterizes virus samples to evaluate vaccine efficacy. Currently, 75.6% of influenza A and 64.3% of influenza B samples are similar to this season’s vaccine. CDC also tests for resistance to four antiviral medications (oseltamivir, peramivir, zanamivir, and baloxavir); 99.7% of samples tested show no resistance. Antiviral treatment is recommended as early as possible for patients with severe illness or who require hospitalization.

VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those with contracted health insurance.

For those without insurance:

- Adults (19+ years) can receive the flu shot for $30.
- Seniors (65+ years) can receive high-dose Fluzone® for $45.
- Children and adolescents (<19 years) may receive the vaccine for an $8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
