Influenza activity in Davis County remains at a high level. The school absentee rate dropped notably, below what has been seen in past years (see Figure 1). There were 12 hospitalized influenza cases that occurred in Davis County during Week 8, bringing the season total to 103. The number of hospitalized cases decreased, while the influenza-like illness (ILI) rate increased slightly in Week 8 (see Figure 2).

Influenza-like Illness (ILI) is defined as fever (temperature of ≥ 100° F [37.8° C]), cough, and/or a sore throat without a known cause other than influenza.
INFLUENZA ACTIVITY IN UTAH*

Utah’s influenza severity estimate remained at a moderate level during Week 8. There were 80 hospitalized influenza cases reported during Week 8 in the state of Utah, with a total of 974 cases so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 1,098 specimens were positive for influenza during Week 8. The predominant circulating virus this week is Influenza A. Influenza B also continues to circulate.

INFLUENZA ACTIVITY IN THE UNITED STATES**

The number of hospitalizations are similar to what has been seen in past seasons, however rates in children and young adults are higher than at this time in recent seasons. During Week 7, three states reported regional activity, and 47 states (including Utah) reported widespread activity (see Figure 3).

Collaborating clinical laboratories across the United States reported that 29.6% of respiratory specimens tested were positive for influenza in Week 7. Of those, 63.5% were typed as influenza A and 36.5% as influenza B.

CDC recently published the midseason estimates of the 2019-20 influenza vaccine effectiveness. Early estimates indicate that the influenza vaccines have reduced the risk of medically attended influenza-related illness by 47%. Vaccination reduced the rate of illness due to Influenza A 2009 H1N1 by 37% and Influenza B by 50% among all ages.

VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those with contracted health insurance.

For those without insurance:

- Adults (19+ years) can receive the flu shot for $30.
- Seniors (65+ years) can receive high-dose Fluzone® for $45.
- Children and adolescents (<19 years) may receive the vaccine for an $8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
