# INFLUENZA REPORT

**2021-22 Influenza Season** Week 14 — Week Ending 4/09/2022

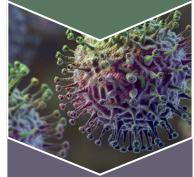

Weekly hospitalizations:

5

Weekly ILI rate:

2.7%

Influenza-like Illness (ILI)
is defined as fever
(temperature of ≥ 100° F
[37.8° C]), cough, and/or a
sore throat without a
known cause other than
influenza.

#### INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County is currently at a *low* level. No school absentee rate was provided for Week 14 due to Davis School District Spring Break (see Figure 1). There were five influenza-associated hospitalizations reported in Week 14. Updated influenza-like illness (ILI) rates for this season can be found in Figure 2.

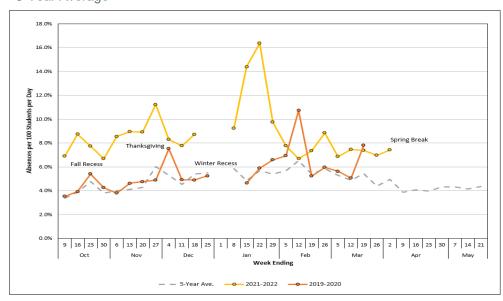

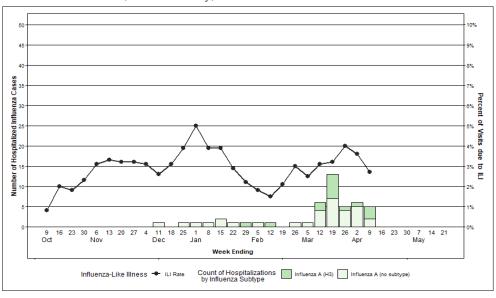

Figure 2. Influenza-like-Illness rate and Hospitalized Influenza Cases, by subtype and admission date, Davis County, 2021-22

#### **INFLUENZA ACTIVITY IN UTAH\***

Utah's influenza severity was estimated at a low level during Week 13. There were 65 hospitalized influenza cases reported during Week 13 in the state of Utah, with a total of 638 hospitalizations so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 1,280 specimens were positive for influenza during Week 13. The predominant virus currently circulating in the community is

influenza A (H3N2).

Table 1. Influenza Positive Specimens Tested by Utah Laboratories, 2021-22

Positive Specimens by Type/Subtype	Current Week		Season-to-Date	
	Number	%	Number	%
Influenza A (2009 H1N1)	0	0.0%	0	0.0%
Influenza A (H3)	85	6.6%	1,125	9.2%
Influenza A (no subtype)	1,193	93.2%	11,031	90.1%
Influenza B	2	0.2%	92	0.8%
Total	1,280		12,248	

## **INFLUENZA ACTIVITY IN THE UNITED STATES\*\***

During Week 14, influenza activity increased nationally this week. Influenza activity is highest in the central and south-central regions of the country and is increasing in most regions. Thirty-eight states reported minimal activity, eight states (including Utah) reported *low* activity, three states reported *moderate* activity, and one state reported high activity (see Figure 3).

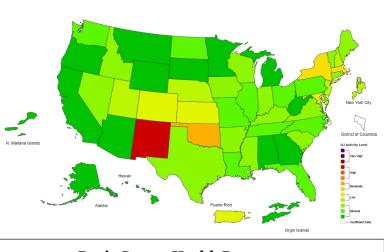

Collaborating clinical laboratories across the United States reported that 8.4% of respiratory specimens tested were positive for influenza in Week 14. Of those, 99.3% were typed as influenza A and 0.7% as influenza B.

CDC performs genetic and antigenic characterization of U.S. viruses submitted from state and local

laboratories. The specimens are also tested for susceptibility of influenza virus to antiviral medications. H<sub>3</sub>N<sub>2</sub> viruses identified so far this season are genetically closely related to the vaccine virus but there are some antigenic differences that have developed as H3N2 viruses have continued to evolve.

## **Davis County Health Department** Communicable Disease & Epidemiology

22 S. State Street · Clearfield, ŪT · 84015 801-525-5200 (phone) · (801)525-5210 (fax) www.daviscountyutah.gov/health

# **VACCINE** INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those with contracted health insurance.

For those *without* insurance:

- Adults (19-49) can receive the flu shot for \$35.
- Adults and Seniors (50+ years) can receive the flu shot for \$70.
- Children and adolescents (<19 years) may receive the vaccine for an \$8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
