Strengths:

 Some of the lowest alcohol, tobacco and other drug (ATOD) use rates in the nation

Challenges:

- Suicide ideation, plan and attempts have been trending up each year for all grades.
- There has been a 136% increase in suicides among Utah youth aged 10-17 from 2011 to 2015, compared to an increase of 23.5% nationally.
- 20% of students have high need for mental health treatment.
- Priority risk factors include: low commitment to school, depressive symptoms, academic failure.
- The most commonly used substance is e-cigarettes/ vaping followed by alcohol.
- Of students who use alcohol 40% used at home with parent permission.
- Perceived use of ATODs is much higher than actual use.
- Sexting issues are requiring considerable response by Davis School District. Sexting questions should be added to student health and risk prevention survey.
