# INFLUENZA REPORT

2021-22 Influenza Season Week 13 — Week Ending 4/02/2022

## LOCAL SUMMARY

ILI activity level:

**Low**

Weekly hospitalizations:

**6**

Weekly ILI rate:

**3.6%**

Influenza-like Illness (ILI) is defined as fever (temperature of  $\geq 100^{\circ} F$  [ $37.8^{\circ} C$ ]), cough, and/or a sore throat without a known cause other than influenza.

## INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County is currently at a *low* level. The school absentee rate for Week 13 is currently unavailable, but will be updated once data become available again (see Figure 1). There were six influenza-associated hospitalizations reported in Week 13. Updated influenza-like illness (ILI) rates for this season can be found in Figure 2.

Figure 2. Influenza-like-Illness rate and Hospitalized Influenza Cases, by subtype and admission date, Davis County, 2021-22

## INFLUENZA ACTIVITY IN UTAH\*

Utah's influenza severity was estimated at a *low* level during Week 13. There were 65 hospitalized influenza cases reported during Week 13 in the state of Utah, with a total of 638 hospitalizations so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 1,280 specimens were positive for influenza during Week 13. The predominant virus currently circulating in the community is influenza A (H3N2).

Table 1. Influenza Positive Specimens Tested by Utah Laboratories, 2021-22

Positive Specimens by Type/Subtype	Current Week		Season-to-Date	
	Number	%	Number	%
Influenza A (2009 H1N1)	0	0.0%	0	0.0%
Influenza A (H3)	85	6.6%	1,125	9.2%
Influenza A (no subtype)	1,193	93.2%	11,031	90.1%
Influenza B	2	0.2%	92	0.8%
<b>Total</b>	<b>1,280</b>		<b>12,248</b>	

## INFLUENZA ACTIVITY IN THE UNITED STATES\*\*

During Week 13, influenza activity increased nationally this week. Influenza activity is highest in the central and south-central regions of the country and is increasing in the northeastern regions. Thirty-seven states reported *minimal* activity, nine states reported *low* activity, three states (including Utah) reported *moderate* activity, and one state reported *high* activity (see Figure 3).

Collaborating clinical laboratories across the United States reported that 8.3% of respiratory specimens tested were positive for influenza in Week 13. Of those, 98.5% were typed as influenza A and 1.5% as influenza B.

CDC performs genetic and antigenic characterization of U.S. viruses submitted from state and local laboratories. The specimens are also tested for susceptibility of influenza virus to antiviral medications. H3N2 viruses identified so far this season are genetically closely related to the vaccine virus but there are some antigenic differences that have developed as H3N2 viruses have continued to evolve.

## VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those *with* contracted health insurance.

For those *without* insurance:

- Adults (19–49) can receive the flu shot for \$35.
- Adults and Seniors (50+ years) can receive the flu shot for \$70.
- Children and adolescents (<19 years) may receive the vaccine for an \$8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
